

## VoIP Network Environment Readiness Assessment

### Implementing VoIP can be a smart and cost effective decision, but is your network ready?

Increasingly selected as the platform of choice for enterprise voice solutions, VoIP is clearly the core voice technology of the future. Yet the majority of corporate networks are not fully ready for VoIP, resulting in both missed opportunities and challenged implementations.

Today's multi-service business networks are often unique, complex and unpredictable. To ensure that investments in VoIP solutions pay off, it is extremely important to conduct a readiness assessment of your existing network prior to a VoIP system installation. This assessment will enable your organization to take full advantage of the cost savings, improved efficiencies, and enhanced customer service capabilities offered by this technology.

### What to Expect:

Nicom's VoIP Network Environment Readiness Assessment is an established framework which we tailor to your specific needs. Based on your enterprise size and the complexity of your network, our Senior Network Consultants identify areas that may require improvement or correction in order to achieve the extensive benefits of a VoIP deployment.

### Our assessment process includes:

- An inventory of devices residing on your LAN and WAN
- Itemization of all available device configurations
- Identification of which devices can accommodate a converged network implementation
- Coordinate a measurement and analysis of call volumes
- Infrastructure evaluation that affects voice quality or service deployment

Our comprehensive report will include suggestions and specific recommendations your organization should follow in order to meet your VoIP objectives. Our team can also help prioritize and implement the technical recommendations to meet your VoIP goals.

“...through 2012, up to 70% of enterprises that do not perform an initial network assessment will experience service problems, unplanned additional costs and time delays of their IP telephony and infrastructure.\*”

## Why work with Nicom IT Solutions

Nicom has been providing expertise in information and Internet technology services for over 27 years.

Our senior consultants provide clients with the best information technology advice and in turn, the best solutions.

### Our services include but are not limited to:

- IT Strategic Planning
- Project Management
- Disaster Recovery Planning
- Business Continuity Planning
- Business Analysis
- Custom Software Development
- Microsoft Certified SharePoint Services
- Microsoft Certified CRM Services
- Technical & Security Audits
- Web Design & Internet Marketing

“Nicom’s knowledge and experience with computer information systems as well as business systems proved especially valuable.”

-Terry Smyth
